MARLUX with Microban SilverShield helps to keep staff and patients safe.

Without Microban®

Cross-contamination betweeen staff, patients, family and surfaces could increase the risk of hospital acquired infections (HAI's).

Cross Contamination

Pathogens can survive on surfaces for long periods of time and are usually invisible.
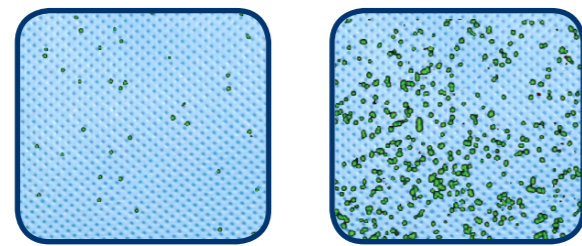

With Microban®

Microban SilverShield is proven to be bactericidal and kills up to 99.99% of bacteria[1].

Locked in

Microban SilverShield is built-in at the point of manufacture to ensure an even distribution.

Unprotected

2 hrs   24 hrs

Microban Technology

2 hrs   24 hrs

Untreated polypropylene
May inhibit growth but does not kill bacteria.

Coated polypropylene
Cannot ensure even distribution and could wear off or wash off.

Traditional curtains
Invisible pathogens could be building up between laundry. rounds

---

MARLUX has a manufacturing and storage facility in the UK, and follows a rigorous batch testing regime to ensure the health and safety of patients.

Date Recording Label

MARLUX curtains come with a date recording label to help provide a visual reminder of when the curtain needs to be changed.

The Care Quality Commission guidance stipulates that disposable privacy curtains should be changed at least once every 6 months. The guidance from both the Infection Control Nurses Association and the National Patient Safety Agency reiterate the same responsibility.

Lightweight & Easy to Change

MARLUX Fast-Fit curtains are lightweight and can be taken down and refitted in 2-3 minutes per curtain, allowing hospital staff to quickly and easily change the curtains when needed.

Fire Retardant

Our fire retardant testing is carried out in the UK by an accredited company for every 5,000m of curtain produced and every curtain is batch coded for traceability.

Fire retardant to BS 5867-2: 2008 type C

MARLUX curtains will work with most standard tracking, where some will require the use of an insert or hook.
