

A BREATH OF FRESH AIR CAN HELP YOU THINK, BOOST YOUR PRODUCTIVITY AND IS VITAL FOR YOUR HEALTH & IMMUNE SYSTEM

Natural air circulating through a building makes a more pleasant environment and workplace, especially during the warm summer months. It can likewise help with wellbeing and health, and enhance productivity and efficiency at work. Open windows and doors are a great way to give outside air access to a building.

It may be enticing to wedge fire doors open to enhance ventilation, however this is illegal and dangerous. Fire doors should be shut in case of fire to stop smoke and flames spreading. Fire door retainers safely hold fire doors open and automatically close them in the event of a fire alarm, ensuring compliance with fire regulations.

Open fire doors also improve access, particularly helpful for people with mobility difficulties, or those carrying anything heavy.

The Solution

Dorgard Fire Door Retainer

Dorgard units are placed at the bottom of fire doors to legally and safely keep fire doors open using a plunger. Once an alarm is activated, the plunger automatically releases, closing the doors. This is a wireless system and therefore requires batteries.

Ideal for:

Retrofit situations as the wireless technology minimises disruption during installation.

Dorgard units can also be used on heavier fire doors.

The Outcome

- Easier access throughout the building
- More fresh air flowing into busy areas
- Peace of mind as fire doors will close when the alarm sounds
