Unbreakable* Vaginal Speculums. Designed for professionals.

We believe every speculum used for gynaecological procedures should be unbreakable*, as standard.

Vernacare Surgical Solutions are proud to manufacture the UK's widest range of unbreakable* vaginal speculums now offering products for most clinical applications which are easy to use, safe and comfortable.

Confidence and Comfort every time

- Safe – Unbreakable* designs
- Cost-effective – Good, better, best and specialist options
- Clinically Clean† & Sterile options available
- Comfortable – Range of sizes, reassuring to patient and practitioner
- Single-use – No cross-contamination
- Made in UK – Low carbon footprint production

Market leading single-use speculums

Developed and manufactured in the UK with extensive input from professionals, each product feature offers improved patient comfort and safety; helping to reduce patient anxiety and enhancing practitioner confidence.

Explore our range of unbreakable* vaginal speculums

We provide a range of speculums to suit all budgets and meet practitioners' requirements across a full range of gynaecological procedures. All our speculums come in a range of sizes to give practitioners the best choice for optimal patient comfort.

From our price competitive clinically clean option to premium sterile instruments and specialist retractors, our comprehensive range will have a suitable solution for your needs.

*Our speculums are manufactured from advanced polymers which are unbreakable in normal use, independently tested by SMTL.
†Packed in a UK manufacturing clean environment.

Why is an Unbreakable Speculum so important?

It is critical for both the clinician and patient that a vaginal speculum must not break (or shatter) within the vaginal cavity. The material construction of Instraspec® and Ultraspec® speculums ensure that this extremely serious device malfunction does not happen in normal use.

Insertion of a speculum can invoke a condition known as Vaginismus, an extremely painful spontaneous involuntary contraction of the vaginal musculature, which affects approximately 1 in 500 women‡. This unforeseen clinical event can exert significant external force on the walls of the speculum, which in turn can cause low strength speculum beaks to break or shatter.

Vernacare's plastic, single-use vaginal speculums are manufactured from a high-strength polymer, which affords it specific, clinically relevant, technical attributes which include, but are not limited to:

- Electrically non-conductive: Our speculums do not allow the passage of electrical current, helping to avoid unintended current leakage from diathermy electrodes or knives.¹
- Low thermal conductivity: Our speculums can also be considered for use during cryosurgical procedures, such as cryoablation of the endometrial lining of the uterus.¹

These enhanced physical properties alone very clearly differentiate Vernacare speculums from low-cost, low strength plastic vaginal speculums which are typically manufactured from Polystyrene, Polyvinyl Chloride or Polythene.

The unbreakable* design of the Instraspec®, Ultraspec®, and EcoGold® speculums' has been independently tested by the Surgical Material Testing Laboratory.

Red Dot Design Award: Instraspec Contour® (red-dot.org)

Ultraspec[®] Retractor

Sterile, unbreakable* speculum with a sidewall retractor to ensure unobstructed view of cervix.

Unbreakable UltraSpec[®] speculum with UltraSpec[®] Sidewall Retractor

Unobstructed view of the cervix – fewer patients need referrals & streamline patient care

Easy and gentle displacement of vaginal sidewall without removing the speculum

Cost saving – use one speculum for inspection and treatment

Time saving – simply insert the retractor instead of aborting the procedure

Patient Protection – designed to reduce incidences of inadvertent sidewall burns during cervical procedures
