Simple weighing

The M-225 is a simple and easy to use chair scale, made from reinforced aluminium, which is ideal for weighing all patients up to a capacity of 250kg.

The scale has been designed to be hard wearing making it ideal for heavy use in busy traffic areas, such as general wards, outpatient departments and busy GP surgeries.

With BSA function

BSA function calculates the surface area of the human body. BSA is commonly used by NHS DEXA scanners to help calculate body composition and medication dosages.

We believe Marsden is the first digital weighing scales manufacturer in the world to include BSA calculation function on a weighing scale. More can be found about BSA on our website.

Easy to use

The M-225 features our popular I-300 indicator, which is very simple to use due to the 5 simple buttons and the large, clear to read display..

The On/Off button ensures that you have full control over the device. Hold enables you to gain weights for the patient is not steady on the scale. Designed with simplicity in mind.
